BEING WRITTEN

LETTER FROM THE CHAIR

To Governor Gina M. Raimondo, Leaders and Members of the General Assembly, and all Rhode Island energy consumers:

On behalf of the Energy Efficiency & Resource Management Council, I am proud to present to you our 2018 Annual Report. In these pages, you will find an overview of our nationally recognized energy efficiency programs and the many signs of our progress.

These programs could not be successful without the extensive public education and outreach efforts of our council members and partners. The more that people understand what energy efficiency is, recognize its value and take positive action to implement it, the more effective we will be in achieving our state's long-term economic, environmental and energy goals.

As energy efficiency adoption spreads, we must work even harder to educate home owners, businesses, state and local government and the public about the lesser-known opportunities to become more energy efficient.

Replacing incandescent bulbs with energy efficient LEDs is often an easy and low-cost way to lower one's energy bills, but that is just the beginning of the benefits. Energy efficiency extends beyond cost savings and can improve the comfort and safety of buildings by cutting down on noise, improving air quality, and providing more control over temperature and climate zones. For instance, universities use energy efficient renovations to make their classrooms more comfortable and conducive for learning; companies make their workspaces more productive and their factories safer.

Energy efficiency not only brings cost savings to the individual ratepayer, but also saves money for everyone on the system. Collectively, if we all reduce the amount of power we consume, the less power we have to generate and the less new wires, poles, transmission towers, transformers and power plants we need to build or upgrade.

In addition to enabling nation-leading levels of energy savings, Rhode Island's investments in cost-effective, low-cost energy efficiency are creating jobs and boosting economic activity. Energy efficiency reduces the cost of doing business in Rhode Island and lowers residents' energy bills, leaving them with more disposable income to spend on other goods and services. These two effects lead to job creation and economic growth.

Rhode Island's leaders and have shown a strong commitment to reducing energy waste across almost all policy sectors. The EERMC is grateful for your support in the past and looks forward to enjoying your continued support in coming years. We are committed to working cooperatively with policymakers and all of Rhode Island's energy consumers to continue the state's leadership position.

As a council, we have never been more engaged than we are today and we look forward to continuing our public education and engagement efforts with your support.

Respectfully Submitted,

Christopher M. Powell, Chair

Energy Efficiency and Resource Management Council

DRAFT: Chris is reviewing

LETTER FROM THE EXECUTIVE DIRECTOR

To Governor Gina M. Raimondo, Leaders and Members of the General Assembly, and all Rhode Island energy consumers:

BEING WRITTEN

Sincerely,

Carol Grant

*Commissioner, Rhode Island Office of Energy Resources
Executive Director, Energy Efficiency and Resource Management
Council*

ABOUT THE EERMC

COUNCIL MEMBERSHIP

The EERMC consists of fourteen members appointed by the Governor with the advice and consent of the Senate. Ten members are voting members with knowledge of energy regulation and law, environmental issues pertaining to energy, energy design and codes, energy efficiency education and employment tracking, and energy users in the following sectors: large commercial and industrial, small commercial and industrial, large non-profit, residential, low income, and municipal. Four members are ex-officio, non-voting members including the Commissioner of the Office of Energy Resources and others representing an electric distribution entity, a gas distribution entity and the fuel oil or heating fuel industry. Members serve voluntarily and meet year-round.

COUNCIL MEMBERS

Christopher Powell, Chair

Voting Member

Assistant Vice President, Sustainable Energy and Environmental Initiatives, Brown University
Representing Expertise in Energy Regulation and the Law

Betsy Stubblefield Loucks, Vice Chair

Voting Member

Independent Strategy Consultant
Representing Residential Users

Joseph Cirillo

Voting Member

Former Building Commissioner
Representing Expertise in Energy Design & Code

Roberta Fagan

Ex-Officio Member

President, Oil Heat Institute of Rhode Island
Representing Expertise in Delivered Fuels

Carol J. Grant

Ex-Officio Member

Commissioner, Office of Energy Resources
Executive Director of the EERMC

Anthony Hubbard

Voting Member

Director, YouthBuild Providence
Representing Low Income Energy Consumers

Jennifer Hutchinson

Ex-Officio Member

Senior Counsel, National Grid
Representing Electric & Gas Utility

Thomas Magliocchetti

Voting Member

Vice President, Facilities Management, Rhode Island Hospital
Representing Large Non-Profit Users

Michael McAteer

Ex-Officio Member

Director, RI Customer & Business Strategy, National Grid
Representing an Electric Distribution Entity

Shigeru Osada

Voting Member

Sr. Vice President, Toray Plastics
Representing Large Commercial & Industrial Users

Karen Verrengia

Voting Member

Field Manager, CLEAResult
Former Energy Manager, Cranston Public School Department
Representing Expertise in Workforce Development

Diane Williamson

Voting Member

Director of Community Development, Town of Bristol
Representing Municipalities

Appointment pending

Voting Member

Representing Expertise in Environmental Issues

Appointment pending

Voting Member

Representing Small Commercial & Industrial Users

WHO WE ARE & WHAT WE DO

The Energy Efficiency and Resource Management Council (EERMC) has been providing an integrated, comprehensive, public, stakeholder-driven organizational structure to secure for Rhode Island's energy consumers the economic and environmental benefits of energy efficiency since the Council's formation in 2006 under amendments to R.I.G.L. § 42-140.1.

In representing small and large businesses, non-profit organizations, homeowners and renters, and municipalities and government, the EERMC oversees highly successful programs that allow Rhode Islanders to access energy efficiency instead of having to purchase more costly energy supply. A valuable outcome of these programs is to also support a growing industry of Rhode Island energy efficiency service and product suppliers, which support local job growth and in-state financial investments.

The effects of energy efficiency in the last decade now cumulatively account for approximately 20% of Rhode Island's electricity needs. Without the cost-effective energy efficiency investments made over time, which cost on average about 4 cents per kilowatt-hour saved, we would now be paying more than twice that amount to supply that energy.

Rhode Island consumers are the focus of Least Cost Procurement, so ensuring the consumer voice in energy efficiency procurement decisions is critically important. The EERMC, assisted by its expert consultant team, provides meaningful input into National Grid's efficiency procurement plans and adds significant stability to investment decisions. The EERMC's model for structured stakeholder participation has been successfully deployed annually in a nationally-recognized process to set appropriate energy saving targets and then establish implementation plans that are equitable, cost-efficient and cost-effective to maximize benefits for all Rhode Islanders.

A key accomplishment for the EERMC in 2017 was reviewing and approving the Three-Year Plan for Energy Efficiency covering 2018-2020, which resulted in National Grid filing the plan with the Rhode Island Public Utilities Commission (RI PUC), which subsequently approved it.

Our Mission

The Council's mission is to serve Rhode Islanders in their homes and businesses. We represent your needs by providing integrated, comprehensive stakeholder feedback about energy decisions. Our goal is to ensure Rhode Islanders are getting the least expensive and most environmentally healthy energy supply through energy efficiency, conservation, and resource management.

Our Purposes

Make
Recommendations

Engage Stakeholders

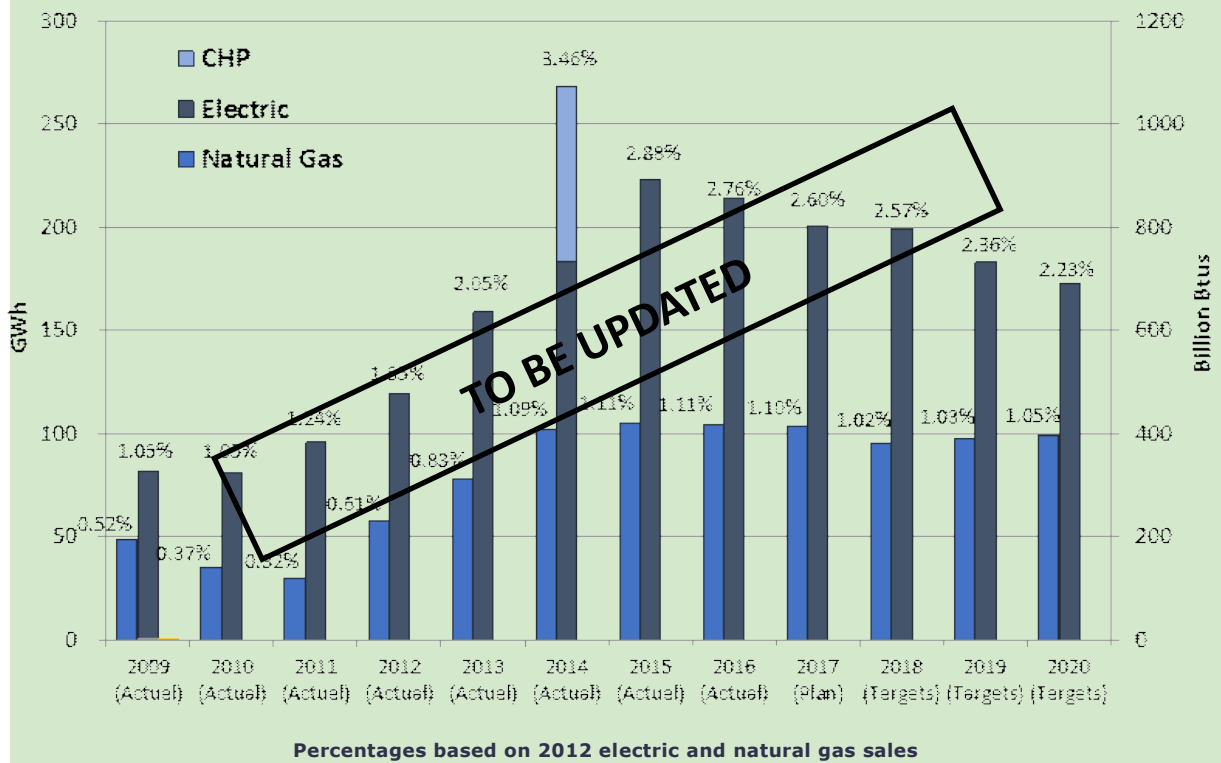

Monitor and Evaluate

Ensure Public Benefit

ACTUAL ENERGY SAVINGS (2009-2016) AND TARGETS (2017-2020)

The remainder of this report describes the specific activities of the EERMC in 2017 which include:

- ◆ Providing oversight and input into 2017 program implementation, which resulted in savings over 100% of the goal in all sectors, within budget.
- ◆ Collaborating with National Grid and key stakeholders on the development of the 2018-2020 Three-Year Energy Efficiency Procurement Plan and System Reliability Plan, the 2018 Energy Efficiency Program Plan, and the 2018 System Reliability Procurement Report. The RI Public Utilities Commission unanimously approved these plans.
- ◆ Monitoring and supporting product launches and enhancements of the Rhode Island Infrastructure Bank, and proposing other key recommendations for making energy efficiency even easier and more accessible to Rhode Islanders through improved financing options.
- ◆ Exploring challenges, barriers, and opportunities to have a lower cost, cleaner energy future through comprehensive energy system planning and policies.

2017 ACHIEVEMENTS AND HIGHLIGHTS

Rhode Island remains a nationally recognized leader in implementing high-quality energy efficiency programs. Since 2009, Rhode Island has consistently been in the top 10 states ranked by the American Council for an Energy Efficient Economy’s State Energy Scorecard. In 2017, Rhode Island received the number 1 ranking in the category of “utility-sector energy efficiency programs and policies” after once again being the only state to earn a perfect score in that category. Rhode Island also ranked #3 overall by having some of the most aggressive targets in other categories, including transportation, combined heat and power, and state government initiatives.

Benefits of the Rhode Island Energy Efficiency Programs

Since 2008, Rhode Island has invested \$569 million in energy efficiency and consumers have realized \$2.3 billion in economic benefits.

GHG Reduction
Will avoid 7 million metric tons from investments since 2006.

In 2016, 923 firms were involved in delivering Rhode Island’s energy efficiency programs, with 82% of those companies located in Rhode Island.

The state’s energy efficiency investment since 2008 will create over 23,000 job-years of employment economy-wide and add \$2.3 billion to Gross State Product.

ENERGY SAVINGS

1,301,132 MWh of total electricity savings.

2,465,998 MMBTU of total natural gas savings.

In 2016, 702 full-time equivalent jobs were directly related to the delivery of the state’s energy efficiency programs.

201# PROJECTED CUMULATIVE SAVINGS FROM ENERGY EFFICIENCY

POLICY RECOMMENDATIONS

R.I.G.L. § 42-140.1-5 requires that the EERMC “Submit to the joint committee on energy an annual report... regarding the activities of the Council, its assessment of energy issues, the status of system reliability, energy efficiency and conservation procurement, and its recommendations regarding any improvements which might be necessary or desirable.” The EERMC submits the following recommendations that will support Rhode Island’s position as a national leader in energy efficiency and resource conservation.

As in previous years, we present both *Policy Recommendations* for 2018 and a *Progress Report* on previous recommendations.

2018 Policy Recommendations

1. The EERMC strongly recommends that the executive branch and legislature continue to support Rhode Island’s Least-Cost Procurement law (§ 39-1-27). It is essential that this law is protected because it actively saves Rhode Islanders money and supports Rhode Island’s aggressive economic development and environmental goals. We encourage passing legislation that facilitates this law’s implementation and resists arbitrary limits on cost-effective energy efficiency investments.

Rhode Island’s Least-Cost Procurement law ensures electric and natural gas energy efficiency programs are available to Rhode Islanders. These programs reduce overall energy demand and infrastructure costs, support local jobs, and reduce greenhouse gas emissions. The law also requires all energy efficiency savings cost less than purchasing more power supply. In other words, the law actively saves Rhode Island ratepayers money.

2. We should build on the successful creation of the Rhode Island Infrastructure Bank and facilitate new financing options for building energy projects for all sectors of the economy. In 2018, it is of particular importance that any barriers currently preventing Rhode Island schools from leveraging all available building financing programs be removed.
3. A method for funding and supporting efficiency investments in homes that use unregulated fuels, such as oil and propane, should be implemented.
4. Rhode Island should adopt comprehensive appliance efficiency standards that also backstop existing federal appliance standards that may languish. Such action would achieve large energy and cost savings for Rhode Islanders.
5. Rhode Island energy efficiency programs should constantly work to ensure that all customers and segments of the market have access to the benefits of energy efficiency savings. There should be a concerted effort to reach those who are economically vulnerable, and those who are currently above poverty guidelines, but need significant assistance to make efficiency investments.
6. A concerted effort should be made to coordinate energy efficiency programs with renewable energy deployment and other available state and federal clean energy and greenhouse gas reduction programs and incentives.
7. Aggregated or asset-based building energy information should be clearly defined as public information by the executive branch and general assembly. This would allow greater transparency in Rhode Island building transactions, would spur the market for more energy efficient homes, and would provide a level of customer protection not currently available to home buyers and renters.

Progress on Previous Policy Recommendations

Strong progress has been made on the following, previous EERMC policy recommendations:

1. Expanding access to well-designed financing options that supplement and tie-in to successful rebate and incentive programs to allow more energy efficiency to be captured. The establishment of the Rhode Island Infrastructure Bank through the leadership of the Office of the Governor and the Office of the General Treasurer as well as the General Assembly’s passage of supporting legislation successfully delivers an effective means to this end to benefit all Rhode Islanders. Financing options such as the Efficient Buildings Fund and Commercial Property Assessed Clean Energy (C-PACE) are now available for many Rhode Island municipal and commercial facilities.
2. Establishing a “Rhode Island Sustainability Hub” to empower customers to save energy and optimize the use of the electric distribution system. In 2016, National Grid selected a space in downtown Providence to create the Rhode Island Energy Innovation Hub (The Hub). The Hub opened in 2017 and is actively serving as an educational facility with interactive exhibits that highlight the successes of today’s energy solutions while empowering customers to create the sustainable energy future of tomorrow.
3. Supporting the continuation of Rhode Island’s landmark Comprehensive Energy Conservation, Efficiency, and Affordability Act of 2006 that established Least Cost Procurement as the state’s overarching resource acquisition strategy for electricity and natural gas. This act was set to expire in 2018, but due to commendable action taken by the General Assembly, Least Cost Procurement has been extended through 2024. This ensures that all Rhode Islanders can continue benefitting from investments in all cost-effective energy efficiency. It is important that this law continue to be protected and perpetuated for the benefit of all Rhode Islanders.

2017 PROGRAMS & INITIATIVES

Residential Energy Efficiency Programs

National Grid offers comprehensive energy efficiency solutions for all Rhode Island residential customers. The goals of these offerings and services are to educate residents on saving energy and reducing energy bills while improving the comfort in their homes. The energy efficiency solutions concentrate on creating energy efficient homes, promoting efficient products, facilitating market transformation for efficient products, and educating consumers through community outreach and annual events such as the Energy Expo at the Rhode Island Home Show and the RI Energy Challenge.

2017 marked a continuation of residential market transformation in lighting, as energy efficient LED lighting technologies became the baseline lighting offering across the residential portfolio. To help the income eligible customers benefit from energy-saving LED lighting, the Company offered no-cost LED two-packs in RI Food Banks.

National Grid also continued to present Rhode Islanders with energy efficiency opportunities as well as tools to affect energy use behavior through Home Energy Reports (HER). In its fifth year running, the HER program continues to encourage energy efficiency behavior through personalized print and email reports, and a seamlessly integrated website. Each of the communication channels displays energy consumption patterns, contains a normative comparison to similarly sized and similarly heated homes, and gives customers the information and tools to reduce their usage.

New for 2017, the Company began sending non-Advanced Metering Infrastructure (AMI) High Use Alerts to customers trending to

exceed the prior month's bill by 30%. In addition, the company included more personalized information in the communications.

The image shows a screenshot of an email alert from National Grid. At the top, it says 'nationalgrid' with the tagline 'HERE WITH YOU. HERE FOR YOU.'. The main heading is 'Due to cooler weather, you're on track for higher natural gas usage'. Below this, it states 'This month was an average 13°F cooler than last month'. A bar chart titled 'This month's projected natural gas use' compares 'This month' (represented by a red bar) to 'Last month' (represented by a grey bar labeled '17 therms') and 'Today' (represented by a light orange bar). Below the chart, it says 'For billing period beginning October 31, 2017'. At the bottom, there is a disclaimer: 'This alert is designed to help you take control of your energy use and save on your energy bill. We use your past year of energy use and weather data to determine if you may be on track for higher than normal usage. If you would prefer not to receive these alerts, you can unsubscribe here.'

High Use Email Alerts, such as the image here, were launched in 2017 to give customers more control over their energy consumption

The towns of North Kingstown, Cumberland, Smithfield, and Richmond all ran intense 6-month energy saving campaigns in their communities and earned grants to be used for energy efficiency improvements on public properties. As a result of these towns leading by example, energy committees or volunteer groups were formed in each town and over 1,300 requests for home energy assessments were generated.

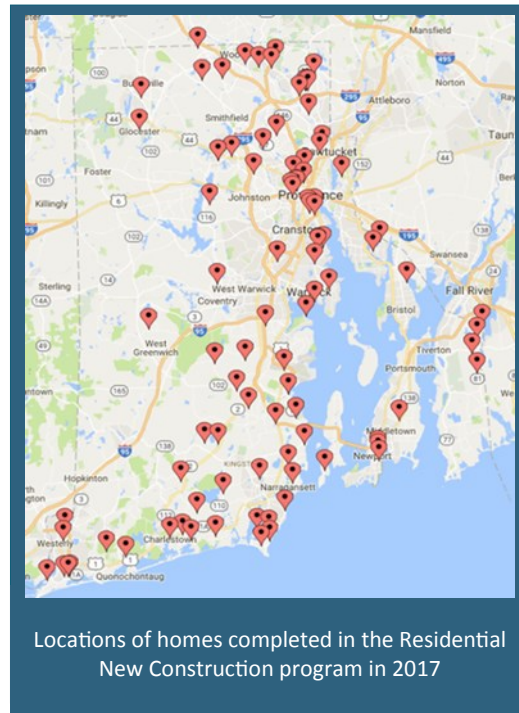

In October 2017, National Grid opened the doors to the Energy Innovation Hub (Hub) as a community engagement destination designed to expand customer education and outreach and enrich the customer's understanding of energy and opportunities to reduce energy consumption. The Hub helps customers connect to their own energy use as well as the greater State-wide participation and how such participation contributes to the

State's greenhouse gas and energy reduction goals.

National Grid continued its core residential energy efficiency programs in 2017:

- *EnergyWise* offers single family customers no-cost home energy assessments, weatherization, and information on their actual energy usage. Participants in this program receive personalized recommendations to reduce their energy consumption and improve the comfort in their home, technical assistance and education, and offers for financial incentives to replace inefficient lighting, appliances, thermostats, heating and cooling systems, and insulation with technologies that are more energy efficient. For the second consecutive year, the program was awarded the ENERGY STAR® Partner of the Year award in program implementation. This award recognizes the robust savings Rhode Islanders are receiving as well as the innovative program design. The program also celebrated 16 Century Club recipients who are insulation contractors that weatherized 100 or more residential homes in Rhode Island.
- *The Residential New Construction Program* provides technical support and incentives for the construction and renovation/remodeling of high-performing energy efficient single family, multi-family, and income eligible homes. The Program incentivizes both the efficient building envelope as well as high efficiency mechanical equipment. The number of customer homes served in 2017 increased 29% compared to 2016, and is the highest number of customers served by the program in a single year since program inception. 2017 was another year of increasing numbers of electrically heated homes. In the 2017 Residential New Construction Program 38% of homes were heated

with electric air source heat pumps and 52% were heated with gas. Throughout the year, the program offers training on best practices for designing and building high efficiency homes for builders, tradespeople, designers, and code officials. Outreach efforts were made in 2017 to Building Performance Institute (BPI) certified contractors to promote creating an open-market for Home Energy Rating System (HERS) Raters. HERS Rater training will take place in 2018.

- *The ENERGY STAR® Consumer Products Program* promoted the purchase of high efficiency household appliances and electronics. 2017 produced strong results with both dehumidifier and refrigerator/freezer recycling programs.
- *The ENERGY STAR® Lighting Program* provides negotiated pricing to customers for the purchase of ENERGY STAR® qualified lighting, retail store promotions, and/or mail order. This program provides retailer education and support in the efficient lighting area contributing to overall market transformation.

- *The High-Efficiency Heating and Cooling Programs* (Gas Heat Program and CoolSmart Program) promotes the installation of high efficiency gas and electric space heating and cooling equipment, water heating measures, and controls via tiered customer rebates. In 2017, heat pump water heaters continued an upward trend and as a result they will be offered through an upstream delivery model in 2018. The heating and cooling programs provide contractor trainings and incentives for proper equipment sizing, AC-check of the coolant charge and distribution system improvements.
- *The Home Energy Reports (HER) Program* launched Non-AMI High Use Alerts in May 2017, giving customers more control over their energy consumption and reducing “bill shock” by notifying customers when they were on track to exceed the prior month’s use by more than 30%. The New Movers and Points & Rewards program were discontinued in 2017 with more focus given to greater personalization, such as including balanced billing and Community Action Program (CAP) information for income eligible customers who receive reports and informing customers how the energy they have saved has positively benefitted the community.

2017 Residential Results

- ###,### Annual MWh Saved

goals for the towns of North Kingstown, Cumberland, Richmond, and Smithfield. From junior high students in Cumberland committing the summer to promoting efficiency and penning an opinion piece for the local paper, to the creation of the Richmond Energy Challenge Committee, the residents went above and beyond. As such, all towns surpassed goals, generating over 1,300 requests for assessments and earning \$10,000 for energy improvements.

- *The Multifamily Program* concluded the Request for Proposals (RFP) process initiated in 2016 and contracted with RISE

Engineering to serve as the program’s lead vendor. New for 2017, income eligible residents benefitted from the installation of central gas heating systems in over 60 buildings and a study of boiler monitoring and optimization was conducted (final report

expected in Quarter 2 of 2018). Further, an online sign up website was created to help overcome the barrier of engaging offsite condominium owners, and delivered fuel

We're here to help

Explore National Grid's income-eligible program options

Our programs for income-eligible customers are designed to give you and your family a more efficient home with smaller energy bills. Have a no-cost home energy assessment to see if you qualify for no-cost energy savings improvements and special rates.

Learn more about this and other programs for income-eligible customers at ngrid.com/ri-assistance.

In 2017, the Home Energy Report included special modules for Income Eligible customers directing them to billing assistance and energy saving programs

- The Company’s community based initiative, the *RI Energy Challenge*, set specified residential energy assessment

customers were also served with weatherization measures for the first time.

Income Eligible Services

The Income Eligible Services (IES) program helps reduce electricity and heating costs for residential income eligible customers without any financial obligation from the customer. Income Eligible Services are delivered by Rhode Island's six local Community Action Program (CAP) agencies to customers who are currently on the A-60 or 1301 Low Income rate; qualify for LIHEAP funds from the State; or whose household income level falls below 60% of the Area Median Income (AMI). Services offered to Income Eligible Customers include (1) an energy assessment of lighting, appliances, and behavior to determine baseline consumption and potential replacement if applicable, (2) an inspection of existing insulation to identify opportunities for weatherization, and (3) a safety and energy efficiency inspection of the customer's heating/cooling system for potential replacement if eligible. All customers receive all services and equipment upgrades at no cost.

The program continued to benefit from program improvements resulting in an increase in the number of assessments by 5% from 2016 to 2017 – to a total of 2,639 assessments. The program saw a significant jump in air conditioner replacements by 90% to 1,102 units. Air conditioner replacements may be due to increased frequency of long stretches of hot days. In 2017, targeted marketing efforts were delivered to the income eligible communities to increase awareness and participation in the program. IES initiated the development of an Appliance Management Program (AMP) Manual that will outline the steps and goals of the AMP Assessment. This manual is designed to increase consistency with

AMP Assessments across the six CAPs. Overall, in 2017, IES exceeded the gas goals, but missed the electric goals as a result of installing less LEDs per home than planned. LED bulbs are available at such low-price points that customers are installing them on their own.

Income Eligible Program/WAP Collaborative

National Grid's Income Eligible Services are administered along with related and complementary federal, state, and local programs in collaboration with Rhode Island Department of Human Services (DHS), the CAP agencies, and other local agencies.

2017 Income Eligible Results

Low Income Home Energy Assistance Program (LIHEAP)

The Low Income Home Energy Assistance Program (LIHEAP) block grant is funded through the U.S. Department of Health and Human Services. The purpose of LIHEAP is to assist Rhode Island's income eligible households in meeting the increasing costs of home energy and reduce the severity of any energy-related crisis. Rhode Island's LIHEAP is administered by the Rhode Island Department of Human Services (DHS)

Individual and Family Support/Community Services Division. LIHEAP intake and outreach is provided by the six local CAP agencies. Households are determined eligible for LIHEAP assistance according to income guidelines established by DHS.

Weatherization Assistance Program

The Weatherization Assistance Program (WAP) enables income eligible families to reduce their energy bills (and helps LIHEAP funds go farther) by making their homes more energy efficient, while addressing health and safety concerns. Funds are used to improve the energy performance of income eligible dwellings using the most advanced technologies and testing protocols available in the industry.

WAP is funded through annual appropriations from the U.S. Department of Energy's Weatherization Assistance Program and the U.S. Department of Health and Human Services. The state allocates 15% of its annual LIHEAP funding to weatherization.

2018 Energy Expo at the Rhode Island Home Show

For the fifth consecutive year, the EERMC and National Grid sponsored the Energy Expo at the Rhode Island Home Show. The goal of the Energy Expo is to help Rhode Islanders reduce their energy costs while improving the comfort of their homes. This year, the show ran from April 5 – April 8 at the Rhode Island Convention Center. It provided Rhode Islanders with access to the state's energy efficiency programs, products and services. Show highlights include:

- Over 250 students from 24 Rhode Island career tech schools helped to construct a demonstration project that showcased the components of a home energy assessment

- ◆ ## energy related companies and organizations exhibited, including ## solar installers
- ◆ Over ### energy audit sign-ups were completed
- ◆ Over ##,### LEDs were sold, many as part of #,### energy efficiency kits
- ◆ In total, over ##,### people attended the Home Show

Commercial, Industrial & Public Programs and Initiatives

Large Commercial and Industrial Programs

National Grid offers two programs for large commercial and industrial customers with an average monthly peak demand in excess of 200 kW. Each program contains a few common elements:

- ◆ National Grid offers incentives to reduce the incremental cost barrier to investing in energy efficiency.
- ◆ National Grid reduces barriers to participation by offering a range of technical assistance from identifying opportunities to improving a company's manufacturing process.
- ◆ National Grid makes available various financing solutions for customers. Depending on the program year and budget, National Grid may also have funds available to provide business

owners with zero interest loans for a defined period of time with on-bill payback.

- ◆ The programs are integrated to offer assistance with gas and electric projects at the same time.

The Commercial **New Construction Program** encourages energy efficiency in new construction, major renovations, planned replacement of aging equipment, and replacement of failed equipment through financial incentives and technical assistance to developers, manufacturers, vendors, customers, and design professionals. The program supports both the commercial and industrial new construction projects with proactive technical assistance during design with energy modeling and analysis.

In 2017, interest in new construction continued due to an improving economy. If the economy continues to strengthen, the Company expects to see growth in new construction projects materialize over the next 3-5 years.

In general, in 2017, there were more projects covering a range of building types demonstrating an increase in commercial and industrial development in Rhode Island. Projects included mid-size multifamily, university buildings, garage buildings and large commercial projects.

The **Large Commercial Retrofit Program** encourages the replacement of existing equipment and systems with energy efficient alternatives when the customer is not otherwise planning any investments. The program offers solutions including steam trap repair, Combined Heat and Power (CHP), multiyear Strategic Energy Management Plans (SEMP) with some of National Grid's largest customers, and a variety of upstream programs. In 2017, National Grid had several notable developments in the Large Commercial and Industrial space. The Company went broader

by expanding the Upstream Products Initiatives, continued its partnership and goals with its two SEMP customers, and engaged more customers in the industrial, grocery, and municipal vertical markets initiative. The Company also continued work on the SEMP established with the State of Rhode Island in 2016. In 2017, **XXX** scoping studies and **XXX** retro-commissioning studies were performed in state facilities.

This program also includes an industrial initiative with world-renowned engineering

firm, Leidos, and training for trade allies among many other efforts.

The **Industrial Initiative** in Rhode Island had another very successful year. Goals for electric and gas were exceeded and delivered substantial savings to Rhode Island manufacturers. A total of 89 incentive applications were paid (66 electric and 23 gas) resulting in savings for 38 large industrial customers. The program continues to focus on custom process measures with 82% of the applications relating to process, HVAC, variable frequency drives (VFDs) and other custom measures.

The **EnergySmart Grocer (ESG)** initiative delivered cost effective, comprehensive

energy savings in the grocery market segment in 2017. Notable projects include a chain grocery store in Cranston, RI that will be the first project using CO2 as a refrigerant that the ESG initiative has supported. The program also had another strong year with the largest independent grocery chain in Rhode Island. This chain completed projects with ESG totaling over 1 million kWh making for a third strong year in a row. Other customer projects included chain wide anti-sweat heat controls (ASHC) implementation with a national grocer at their Rhode Island stores providing 1.4 million kWh savings. 2017 also saw an influx of projects with smaller local grocers.

Interest in **Combined Heat and Power (CHP)** projects continued in 2017. Several Technical Assistance (TA) Studies that are done prior to commencing a CHP project, were completed in 2017 and these projects will continue in 2018.

In 2015 National Grid launched a **Solid State Street Light Initiative** that provided energy efficiency incentives for solid state street lighting and controls to municipal customers. There are two options for participating in this initiative, customer owned and Company owned.

- Customer Owned Street Lighting – Rhode Island municipal customers are now eligible to purchase their own street lights from National Grid. Incentives are being offered for solid state lighting and controls, as funding allows. National Grid worked closely with RI OER as well as the cities and towns.
- Company Owned Street Lighting – National Grid filed a company owned street lighting tariff in 2016. This tariff's effective date is January 2017. If the municipal customer prefers to continue leasing their street lights from National Grid, the customer will receive the incentive and the Company will claim the savings. Participation in this initiative has

expanded to 16 communities in Rhode Island as well as the RI DOT Highway Department.

- In 2017 LED street lighting and controls accounted for 24,600 MWh in savings.

For municipal-owned streetlights, Rhode Island's Office of Energy Resources (OER) can also provide financial incentives in addition to those provided by National Grid for conversions to LED technologies with controls. To learn more about this program contact George Sfinarolakis at OER George.Sfinarolakis@energy.ri.gov.

In 2017, the Company launched a **demand response demonstration** called Connected Solutions. The Company's demand response program for C&I customer's aims to help customers reduce their energy use when the grid is at peak. Over the long term, this will enable National Grid to build a smaller transmission and distribution system, allow ISO-NE to acquire less generation capacity, and reduce customers' supply costs. During the summer of 2017 the Company enrolled 32 customers who had a total average curtailment per event of 10.6 MW.

Small Business Energy Efficiency Program

National Grid's Small Business Direct Install program is a retrofit program that provides turnkey services to customers with less than 200 kW average monthly peak electrical demand. As part of the program, customers receive a free on-site energy assessment and a customized report detailing recommended energy efficient improvements. National Grid then completes retrofit installations at the customer's convenience. In 2017, the program served small businesses of all types including restaurants, non-profits, small offices, and senior care facilities.

National Grid pays up to 70% of installation and equipment costs and customers can finance the remaining share of the project over as many as 60 months (typically 24) on

their electric bill, interest free, using the Small Business Revolving Loan Fund, providing that funds are available.

Although the program has traditionally focused on lighting and refrigeration, National Grid is constantly updating the program to apply other measures such as energy management systems, roof-top HVAC unit replacement, and new heating systems. In 2017, controls for both electric and gas measures have gained traction. The program hopes to keep up the momentum in 2018 and beyond.

National Grid has also been actively pursuing new models that serve segments of the small business sector in more tailored and more cost-effective ways. The Company's success with schools, national and regional chains, food retailers, and upstream lighting are all signs of a more strategic approach to these customers.

In 2017, National Grid continued to utilize the existing contractor/electrician base through the Customer Directed Option where customers are allowed to use their own contractors in conjunction with the expertise of the lead vendor in the Small Business Program. These additional "feet on the street" are helping the program maintain its success even as some segments continue to be successfully served through other paths.

Farm Energy Efficiency Program

The Farm Energy Efficiency Program offers Rhode Island agribusinesses incentives for prescriptive energy efficiency measures. Program participants receive a free on-site energy assessment and a report detailing recommended energy-efficient improvements. Farmers or agribusiness owners can then choose to install any number of recommended electric or delivered fuels measures. Delivered fuels measures are eligible for incentives equal to 75% of their installed costs. Electric measure incentives vary depending on the

2017 Small C&I Results

- ##,### Annual MWh Saved
- ###,### Lifetime MWh Saved
- #,### Annual MMBtu Saved
- ##,### Lifetime MMBtu Saved

- \$###,### in Lifetime Gas Bill Savings
- \$##.# Million in Total Economic Benefits

application, but any approved electric measure cost not covered by an incentive can be paid back, interest free, through National Grid's on-bill payment system provided that funds are available. In 2017, 26 Rhode Island farms received no-cost, farm-specific energy assessments.

Commercial and Industrial Finance

The Company along with the State and EERMC have made progress in developing opportunities for **finance mechanisms** to help customers overcome cost barriers and invest in energy efficiency.

Efficient Buildings Fund (EBF): The Company started the year by collaborating with the OER, the Rhode Island Infrastructure Bank (RIIB), and the University of Rhode Island (URI) to move forward in areas critical to the future success of the Efficient Buildings Fund (EBF) in Rhode Island. The activities included benchmarking, developing municipal baselines, and audits of municipal facilities. The vast majority of EBF savings in 2017 can be attributed to street lighting in RI cities and towns.

It was noted that RI School Housing Aid not being fully compatible with EBF was a major barrier to participation. A change in the law

RIIB Reviewing: EBF

has been proposed in 2018 which would allow School Housing Aid and EBF to work together.

On-Bill Repayment (OBR): National Grid also worked extensively with its sales people and several of its vendors to determine the future potential for On-Bill Repayment (OBR) and to understand the future role of OBR in our program offerings. The Company found that demand for OBR was much greater than it had previously estimated and that nearly all participating customers appreciated its unique attributes. The Company presented these findings in front of the PUC in a Technical Session, to the Energy Efficiency Resource Management Council (EERMC), and to the Collaborative.

The Company worked closely with an evaluation contractor to determine the timing and necessity of injections into the OBR fund in the 2018-2020 three year plan as well as the 2018 energy efficiency plan.

Commercial Property Assessed Clean Energy (C-PACE): National Grid continued to work with RIIB and its program administrator, Sustainable Real Estate Solutions (SRS), to advance the concept of C-PACE in the market. In 2017, the main focus was on long term care facilities. While this sector was less fruitful than was expected, utilities learned from this experience and are prepared to bring these lessons in 2018.

The Company worked with RIIB and SRS to understand how C-PACE could be applied to the new construction market in Rhode Island. National Grid believes one key to unlocking the potential in this area is to increase market awareness among local/regional developers and architecture firms.

Ascentium: In the fourth quarter, National Grid began working with Ascentium Capital, a specialty financing firm who is a leader in equipment and technology financing solutions, to offer customers another way to finance their projects. A simple, rapid approval loan process allows customers to use their incentive to buy down interest on loans (typically to zero percent

depending on the term) for up to \$250,000. The Company will continue to examine this option in 2018.

Lead by Example: State and Municipal Entities

In December 2015, Governor Gina Raimondo issued an Executive Order directing State agencies to 'Lead by Example' by achieving robust clean energy targets and developing clean energy practices. As of April 2018, Rhode Island State agencies have reduced their energy consumption by 11%, saved \$2.7million from competitive energy procurement processes, and continue to procure 50% of their electricity supply from "green" energy sources. The Lead by Example initiative is also promoting interdepartmental cooperation, unlocking opportunities to invest in comprehensive energy efficiency and renewable measures that can reduce and stabilize public sector energy costs, shrink government's carbon footprint, and support Rhode Island's burgeoning clean energy economy. Major projects completed in 2017 include, the deployment of solar arrays on Capitol Hill and at the new Veterans Home in Bristol, the conversion of almost all State-owned highway streetlights to cost-effective LEDs, and expanded electric vehicle charging infrastructure at State facilities including the Public Utilities Commission and the Department of Administration.

The programs and initiatives spurred by the Lead by Example executive order are also available for municipalities and quasi-public agencies. Specifically, public entities can receive technical assistance, and in some cases financial support, from Rhode Island's Office of Energy Resources and National Grid to better manage their energy bills through Portfolio Manager (a free online tool from the U.S. Environmental Protection Agency), improve the energy efficiency of their buildings, install renewable energy systems and electric vehicle charging infrastructure, and purchase all-electric or hybrid fleet vehicles. Lead by Example efforts are meant to serve as a model for businesses, organizations, and citizens as we all work together to move Rhode Island

RIIB Reviewing: C-PACE

toward a more secure, cost- effective, and sustainable energy future.

Key 2017 Lead by Example accomplishments include:

- ◆ Ensuring that 50% of electricity consumed by State facilities comes from renewable energy resources
- ◆ Reducing the energy consumption across State facilities by 11% compared to 2014
- ◆ Supporting the installation of 7 new dual port electric vehicle charging stations across the State
- ◆ Launching a Demand Response Program to reduce peak energy demand and generate revenues for the State
- ◆ Developing the State’s first a voluntary building Stretch Code
- ◆ Developing and managing competitive electricity and natural gas supply contracts for all state agencies
- ◆ Developing a centralized utility bill payment system for all state agencies that saves money by avoiding late fees and increasing staff efficiency
- ◆ Converting State-Owned highway streetlights to LED technology

offering that harnesses stakeholder outreach and technical analysis to catalyze increased energy savings from policies that establish minimum efficiency requirements for buildings and the energy-using products that comprise them. In 2017 the Company invested considerably in assessing the impact of this initiative thus far, crafting a document in partnership with OER to guide the state building industry towards our mutual building energy savings goals, and identifying new opportunities for energy savings from codes and standards support. In 2018 and beyond, the Company plans to continue the demonstrated success of our energy code compliance support program while expanding our efforts regarding support of product standards, energy code enhancement, and the new stretch code to unlock opportunities to save additional energy on behalf of customers.

Code Compliance Enhancement Initiative (CCEI): This initiative includes robust stakeholder engagement and industry group outreach, classroom and hands-on trainings, project-specific technical assistance, and development and dissemination of documentation/ compliance tools. In 2017 CCEI conducted a total of 31 training events across the state with 513 total attendees. In addition, four evaluation studies were completed to measure our impact since the start of this initiative.

The CCEI will be entering its fifth full year in 2018, and there continues to be opportunity to improve Rhode Island's energy code compliance rates. The results of last year's evaluations have been leveraged to focus the CCEI's activities in 2018 on remaining code compliance gaps while preparing stakeholders for Rhode Island's anticipated energy code update at the end of the year. The Company will shift to shorter trainings focused on more

specific content in order to directly address compliance gaps and reach new audiences. The Company will also continue to work with the RI Building Code Commission to accommodate the use of third party energy code specialists in the building inspection process as a strategic compliance improvement strategy. Finally, the Company will leverage new data sources including the state's new electronic building permitting system to better target code savings opportunities in major renovations and rehabilitations of existing buildings.

Appliance and Equipment Standards support: Over the past two years, the Company has worked with stakeholders to develop minimum efficiency standards for a targeted list of products, but the required legislation to complete this effort was not passed by state legislatures in 2017. In 2018 the Company is continuing to provide technical support in regards to the proposed product standards legislation. The Company will also work with stakeholders to develop a methodology to claim savings for product standards support in a similar manner to code compliance enhancement, which would allow us to greatly expand the scope and energy savings potential of this effort as soon as 2019. In 2018 the Company also proposes to pursue opportunities to partner with other stakeholders in the northeast as well as efficiency program administrators in California in advancing federal appliance standards.

As of April 2018, bills setting minimum energy and water efficiency standards for nearly two-dozen products had been introduced in Rhode Island House and Senate committees. Similar legislation has been or is expected to be introduced in Massachusetts, New York, and Vermont, representing regional support for appliance standards. Continued collaboration

between the Rhode Island Office of Energy Resources (OER), Northeast Energy Efficiency Partnership (NEEP), Appliance Standards Awareness Project (ASAP), National Grid, and others will enhance education about the net benefits of state appliance standards.

Energy Code Enhancement: Spurred by a two year delay in the state's latest energy code update process, the Company will begin pursuing opportunities in 2018 to strengthen the state energy code. Many of our planned activities parallel those described for product standards support above with the intention of providing technical guidance throughout the state's next code update cycle projected to begin in 2019.

Stretch Code Support: In 2017, the Company helped shape the final, voluntary Rhode Island stretch codes for commercial and residential buildings. In 2018 and in the years that follow, the Company will support proper application of the stretch codes by providing technical expertise on energy related requirements and conducting stretch code specific trainings through CCEI. The Company will also promote increased use of the stretch codes by aligning their specifications with the Company's new construction programs as much as possible and by empowering community-level support for increased use of the stretch code. The new stretch code documents can be viewed on the Office of Energy Resources website. For more information on Stretch Codes, contact Becca Trietch at OER at Becca.trietch@energy.ri.gov.

Block Island Saves Pilot Program

Block Island Saves was a pilot program to deliver energy efficiency assessments, education, incentives, and rebates to New Shoreham year-round residents and small businesses. The New Shoreham community faced unique energy challenges prior to

2017, including high energy prices stemming from electricity generation powered by imported and price-volatile diesel. The recent construction of North America's first offshore wind farm three miles off the coast of Block Island also resulted in connecting the island with the mainland electric grid. This connection has helped stabilize electric prices while strengthening reliability. However, reducing energy use on the island remains critical to ensuring long-term energy affordability and reliability for this important and unique community.

OER collaborated with National Grid to leverage best practices for program development and energy efficiency offerings were carefully chosen to align with existing programs available elsewhere in Rhode Island.

Over the course of the pilot, 79 residents and 31 businesses received free energy assessments, along with rebates and incentives for energy efficiency upgrades. These energy efficiency improvements will save 3,600 MWh of electricity over the lifetime of the improvements (equivalent to the electricity needed to power over 500 Rhode Island homes for one year), in addition to 4,800 MMBtu of oil and 2,300 MMBtu of propane.

These energy savings also fostered important reductions in greenhouse gas emissions – a reduction of 2,400 tons of CO₂ equivalent over the lifetime of the efficiency upgrades. This is equivalent to taking 470 passenger cars off the road for a year or growing nearly 57,000 tree seedlings for 10 years. Participants were able to decrease their energy bills, too. In total, program participants are saving an aggregate \$597,968 (residential) and \$714,396 (business) over the lifetime of the efficiency upgrades.

Block Island Saves had a benefit-cost ratio of 3.65 for the residential program and 1.64 for the small business program, for an aggregate ratio of 2.23 for the entire pilot. In other words, Block Island Saves was a cost-effective program with each dollar spent on Block Island Saves generating \$2.23 in economic and environmental benefits.

The final report on the Block Island Saves Pilot Program is available on OER's website.

Zero Energy Buildings (ZEB) Task Force & Working Group

Zero-energy buildings generate as much energy as they consume. These buildings not only save owners money on utility costs, but also provide a myriad benefits including improved comfort, increased durability, and better indoor air quality. These benefits have been shown to lead to improved health, education, and productivity outcomes for occupants of various building types.

In 2016, National Grid led the Rhode Island Zero-Energy Building Task Force consisting of key stakeholders from the State, associations, architects/engineers, and developers. The Task Force developed and issued a whitepaper report outlining a 20-year roadmap for zero-energy buildings to contribute to the Energy 2035 goal of reducing greenhouse gas emissions by 45% by 2035. The roadmap identifies opportunities including stakeholder collaboration, incentives, education, financing and policies that will help to foster the growth of the residential and commercial Zero-Energy Building market in Rhode Island.

Working on recommendations from the report, OER established a "Zero-Energy Buildings Champion" in 2017 to lead a Zero-Energy Buildings Working Group. The mission of the Working Group is to bring together stakeholders and take action to transform the market. Notably, the Working Group is currently concentrating on building

out educational and informational events, such as tours and trainings, as well as serving as a focus group for incorporating zero-energy buildings into National Grid's programs.

Rhode Island Energy Innovation Hub

Advances in technology and our changing energy landscape are fueling innovation and connecting people, places, and energy in meaningful new ways – changing how we live, work, and play. As such, National Grid in 2016 conceived an interactive space in downtown Providence where Rhode Islanders could become more engaged in learning about – and having a conversation around – energy and the environment.

National Grid is calling this collaborative space the Rhode Island Energy Innovation Hub (Hub). The Hub, which opened in 2017 now serves as an educational facility with interactive exhibits that highlight the successes of today's energy solutions while empowering customers to create the sustainable energy future of tomorrow.

National Grid 2017 Energy Efficiency Jobs Study

National Grid hired Peregrine Energy Group, Inc. to conduct a study of the job impacts from National Grid's energy efficiency programs in 2017. The study estimates the number of full-time equivalent (FTE) employees engaged in all

aspects of energy efficiency programs where National Grid provided funding support in 2017.

The FTE counts cover a wide range of energy efficiency services, including independent contractors and plumbers, rebate processors, engineers, and National

Full-Time Equivalent Employment Supported by Energy Efficiency Programs in Rhode Island in 2017

Programs	Total FTEs
Electric Programs	
Commercial and Industrial	###
Residential Income Eligible	###
Residential Non-Income Eligible	###
Gas Programs	
Commercial and Industrial	###
Residential Income Eligible	###
Residential Non-Income Eligible	###
National Grid EE Staffing	###
WAP/LIHEAP Income Eligible Programs	###
Total 2015 Rhode Island FTEs	###

Grid Staff. The study also includes counts of Weatherization Assistance Program (WAP) FTEs that are employed by the Community Action Program agencies that deliver low-income energy efficiency services. A complete list of all contractors and subcontractors involved in 2017 Rhode Island energy efficiency programs is included in this report on page XX.

The study’s findings were developed through interviews with energy services and equipment vendors and National Grid contractors, as well as through a detailed review of National Grid’s records of all energy efficiency measures installed in homes, apartment buildings, businesses, and

industries throughout the state in 2017. Peregrine Energy Group calculated the labor hours required for each installation based on industry standards and discussions with contractor experts.

Peregrine determined that XXX full-time equivalent (FTE) employees had work in 2017 as a result of investments by National Grid in energy efficiency programs provided to its Rhode Island electricity and natural gas customers. One FTE equals 1,760 work hours, or the total of one person working 8 hours a day for 220 work days in an average year. Because a “full-time equivalent” employee often represents the labors of more than one person over the course of a year, the number of individual workers employed as result of Rhode Island energy efficiency programs funded by National Grid is far larger than the total of FTEs. Most of the jobs created as a result of energy efficiency investments were local because they were tied to installation of equipment and other materials.

The study also identified XXX companies and agencies involved in National Grid’s 2017 energy efficiency programs, XX% of which were located in Rhode Island. The companies identified include those whose employees are counted in the FTE analysis, as well as additional companies who assisted customers to secure equipment rebates, for example through the New Construction, Commercial Upstream Lighting, or High Efficiency HVAC programs.

The study fulfills General Law 39-2-1.2, which was enacted by the General Assembly in 2012. The study will benefit those who work in workforce development, training or those interested in the state’s green jobs.

PLANNING INITIATIVES

State Goals: State Energy Plan & GHG reduction goals

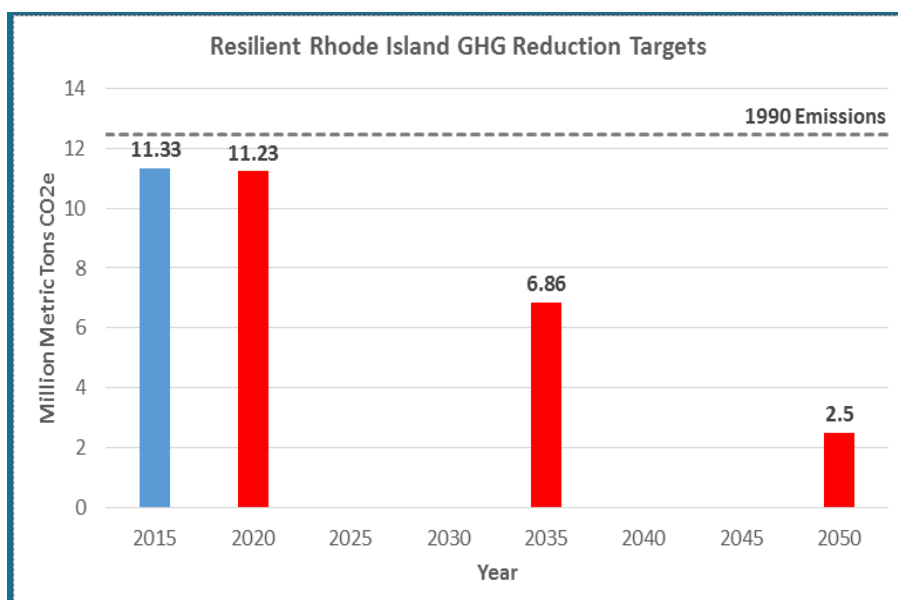

Energy 2035: The Rhode Island State Energy Plan, formally adopted in October 2015, lays out a long-term, comprehensive energy

strategy for Rhode Island. The vision of the Plan is to provide energy services across all sectors—electricity, thermal, and transportation—using a secure, cost-effective, and sustainable energy system. The Plan demonstrates that Rhode Island can increase sector fuel diversity, produce net economic benefits, and reduce greenhouse gas emissions by 45 percent by the year 2035. The Plan proposes state-of-the-art policies and strategies to achieve those goals.

The Plan identifies energy efficiency as the state’s “first fuel” and a centerpiece strategy for achieving the Rhode Island Energy 2035 Vision. The SEP identifies energy efficiency as the lowest-risk, lowest-cost, and arguably, the most sustainable energy resource available for Rhode Island. The SEP lists Least-Cost Procurement as one of Rhode Island’s cornerstone energy policies, and the primary vehicle for delivering the benefits of energy efficiency to Rhode Island consumers and businesses.

with National Grid, the Office of Energy Resources, the Division of Public Utilities and Carriers, and additional key stakeholders to develop the 2018-2020 Energy Efficiency Procurement Plan for Rhode Island. National Grid filed the Three-Year Plan with the Public Utilities Commission on August 30, 2018. The purpose of this Three-Year Plan is to establish an overarching strategy for the next three years that will enable National Grid to successfully meet the goals of Least Cost Procurement and meet the Energy Savings Targets developed by the EERMC and approved by the Public Utilities Commission. The Three-Year Plan met the objectives of being cost-effective and less than the cost of supply, and is grounded in economics, flexible to changing market conditions, and designed to maximize consumer benefit.

The 2018-2020 Three-Year Plan is expected to achieve the following large beneficial impacts:

Graph adapted from the Rhode Island Greenhouse Gas Emission Reduction Plan¹

- Boost Rhode Island’s Gross State Product by \$328 million.
- Create over 4,822 job-years of employment.
- Deliver more than \$2.76 dollars in benefits to consumers for every dollar invested.
- Lead the nation in electric and natural gas savings as a percentage of total annual energy consumption.
- Create cumulative energy efficiency savings of 7.53% of Rhode Island’s 2015 electric load and

2018-2020 Energy Efficiency Procurement Plan (Three-Year Plan)

As part of the legislated triennial process to develop Three-Year Energy Efficiency and System Reliability Plans, the EERMC worked

2.90% of 2015 natural gas load over the period 2018-2020

- Generate approximately \$1.6 billion in benefits over the life of the installed measures.

- Reduce carbon emissions by 3.7 million tons over the lifetime of the installed measures.

Energy Efficiency Program Plans (Annual Plans)

In addition to the three-year plan, annual energy efficiency program plans (Annual Plans) are developed by National Grid with significant stakeholder input. These annual plans clearly define how the energy efficiency programs will be implemented and specify how the programs will be cost-effective. The annual plans are also reviewed and ruled on by the PUC. Work on the 2019 Annual Plan will commence in early summer 2018.

System Reliability Procurement

In System Reliability Procurement (SRP), the Company develops and implements non-wires alternative projects (NWAs). This involves identifying transmission or distribution needs that have the potential to be deferred by distributed energy resources within a specified timeline. These projects are customer-focused and can include some measures that are also offered through the Company's statewide energy efficiency programs.

Program year 2017 marked the last year of the Demandlink™ pilot in Tiverton and Little Compton. Launched in 2012, the pilot's primary objective is to implement a combination of energy efficiency and demand response measures in customer homes and businesses in order to reduce 1 MW of load on the affected feeders by the end of 2017. In 2017, the Company maintained the same portfolio of incentives as the previous year, hoping to continue the rate of recruitment. The Company also continued to leverage its statewide EnergyWise and Small Business Direct Install programs in the promotion and delivery of these measures. Between June and September 2017, fifteen demand response events were conducted. A final

evaluation is being conducted in 2018 to report out on the final impacts from this pilot.

The new NWA project proposed in the 2018 SRP Plan is the Little Compton Battery Storage Project. This project includes a battery storage system that will be installed in Little Compton, RI that is capable of providing 1 MWh of energy storage at a level of 250 kW of continuous peak load relief in the areas of Tiverton and Little Compton between the hours of 3:30pm and 7:30pm during the months of June through September. This project will further defer the \$2.9 Million substation upgrade in this area.

In 2018, the SRP program is also focusing on the creation of the Rhode Island System Data Portal (Portal) and associated marketing and engagement plan. The Data Portal will provide information on parts of the electric system that are heavily loaded and could benefit from the installation of technologies that can reduce demand as well as areas where there is plenty of capacity that may be better suited for electric heat and electric vehicles. The Portal will also include an initial version of a distributed generation (DG)-focused map that identifies substations that are either DG-ready or in need of upgrades before DG can be installed. Together, these efforts will promote the Portal to potential distributed energy resource (DER) solution providers. This effort would aim to increase industry knowledge of the Portal and incentives available through existing Company and state programs for conservation, peak load relief, and renewable energy projects in highly-utilized areas.

Additional SRP details on 2017 activities and 2018 plans can be found in the Company's 2018 System Reliability Procurement Report filed in Docket 4756 and approved by the PUC on December 20, 2017.

Power Sector Transformation

In March of 2017, Governor Gina M. Raimondo charged the Public Utilities Commission (PUC), the Office of Energy Resources (OER), and the Division of Public Utilities and Carriers (DPUC) with developing recommendations to advance power sector transformation (PST) in Rhode Island. The goal of the PST Initiative is to transition to a more dynamic utility regulatory framework in order to achieve a cleaner, more affordable, and reliable energy system for the 21st century and beyond. The three agencies partnered to solicit input from Rhode Island stakeholders and national experts, submitting a final Phase One Power Sector Transformation report with recommendations to the Governor in November 2017. The final report drew upon previous work to date by the EERMC, the Distributed Generation Board, the Systems Integration Rhode Island Working Group, and the PUC's Docket 4600 Investigation of the Changing Distribution System. Policymakers, regulators, and stakeholders are working actively to implement the PST recommendations, including through the open docketed proceedings of National Grid's distribution rate case and Power Sector Transformation filings (Dockets 4770 and 4780).

LOOKING FORWARD: 2017 ENERGY EFFICIENCY PROGRAM PLAN HIGHLIGHTS

Residential Programs

Multifamily Program

In 2018, the Multifamily program will make wider use of the personalized condominium sign up portal in the market rate program. Additionally, the company will focus on identifying sites where ductless mini-split heat pumps (DMSHP) will be installed to

displace electric resistance heat. The company will further identify a delivered fuel-served site to investigate conversion to DSMHPs. In summer 2018, the Company will review the findings of the boiler monitoring and optimization work conducted in 2017 and consider expansion if results are favorable.

EnergyWise

The EnergyWise program will provide more moderate income financing by establishing a revolving loan fund with The Capital Good Fund in 2018.

Residential New Construction

In 2018 the Company will re-design the Residential New Construction program to accommodate the increased baseline and will launch a zero-energy home pilot. The Company will continue to work with the Zero-Energy Buildings - Residential Subgroup on developing a robust plan for residential zero energy homes.

The High-Efficiency Heating and Cooling Programs (Gas Heat Program and CoolSmart Program)

In 2018 the Company will deliver heat pump water heaters through an efficient and cost effective up-stream model with Lowes and other RI distributors. In addition, the Company will launch a new strategic electrification effort with mini-split heat pumps for customers with electric, oil or propane heat – either early replacement or upon failure.

Income Eligible Enhancements

The program will continue to increase services that deliver significant energy savings such as LEDs, heat pump water heaters, and replacement room air conditioners. The Company will add clothes washers, dehumidifiers, and possibly mini-split heat pumps in 2018.

Community Initiative

The Community Based Initiative in 2018 will operate under a revised model within two RI cities. This new model will focus on efficiency measure installations and home energy assessment sign ups. The cities will be provided with start-up funding and marketing kits to promote efficiency throughout the year.

Home Energy Reports

Customers will receive print and email reports in 2018 that are more personalized than in previous years. Efforts to give customized communications to income eligible customers will continue. Further, the High Use Alerts established in 2017 will continue in order to inform customers when they are trending towards a bill significantly higher than the prior month. Also of focus in 2018, information provided by customers who fill out the online home energy assessment will be used to provide those customers with tailored program offerings.

Cold Climate Heat Pumps

National Grid is proposing to incentivize a modest number of ductless air-source heat pumps in 2018 to begin the process of a long-term market transformation of displacing electric resistance or delivered fuels heating systems with high-efficiency cold climate electric heat pumps. The proposed program offering would include customer education about the benefits of the technology, criteria for proper use and optimal operation of the units; contractor education about the product, sizing and installation requirements; strategic marketing to customers through program segmentation; research, and piloting of available enhancements (i.e., integrated controls that tie into both the heat pump and existing heating system, mid/up-stream markets, bundling of incentives).

Commercial, Industrial, Public & Other Programs

In 2018 the RI energy efficiency programs will be focus on many initiatives including finance solutions, path to zero energy buildings initiatives, demand response demonstrations, as well as developing new CHP project pipeline for the future years.

The pilots and demonstrations can be classified into four focus areas that include demand response (gas and electric, including small and large commercial customers), lighting pilots that include new technologies and go-to market strategies, industrial initiatives and new construction, path to zero initiatives.

Demand Response

Demand response, peak load reduction demonstration for large commercial and industrial customers will continue for the second year in 2018.

The program has been modified from last year with easy to understand incentives structure so customers can easily understand the program. The program plans to enroll 20 MW of demand reduction capacity in 2018.

Demand response for small medium business customers in 2018 will be a new demonstration where the Company will test demand reduction with direct load control of Wi-Fi thermostats.

The gas demand response demonstration, similarly, will also be a new demonstration program in 2018.

Industrial Initiative

The Company is looking to test two industrial initiatives that include new technologies and behavior change for small industrial facilities.

1. Behavior Change through education in small and medium industrial plant personnel:

The objective is to provide smaller industrial plants with cost-effective access to an independent air systems specialist to facilitate comprehensive compressed air systems assessment incorporating mostly web based training materials and tools after initial visit to site. This will provide a more cost-effective solution to small and medium manufacturing facilities where having site assessments by specialty Technical Assistance vendors is cost prohibitive.

2. Underutilized Energy Efficiency Technologies on mechanical power transmission systems:

The objective is to investigate the adoption of higher efficiency belt and gear reduction drives associated with various types of machinery used in commercial and industrial facilities. This can result in efficiency improvement ranging from 1-3% on belt drives and significantly higher improvement with gear box upgrades.

Zero Energy Buildings (ZEB)

In 2016 a zero energy building (ZEB) task force prepared a white paper “Zero Energy Buildings pathway to 2035” that made three major recommendations on both the policy side and for utility programs moving forward.

The three recommendations that the Company is looking to implement on in 2018 are:

- Launch “ZEB demonstration projects” across building segments
- Training and education that promotes low EUI buildings for stakeholders in RI to create awareness around Path to Zero Energy Buildings

Supporting legislation like the Providence Energy Challenge with automated upload of data to EPA portfolio manager so customers can benchmark buildings and portfolio

Appendix A:
Case Studies

Jamestown, Rhode Island

The Armington Household

Carolyn Armington is an octogenarian homeowner who has resided in Jamestown, Rhode Island since 2004 in a two-story, 2,200-square foot contemporary home. The primary heating fuel is oil with supplemental electric heat. The home was built in 1985 on a quiet cul-de-sac adjacent to historic farmland with a water view of Narragansett Bay.

Mrs. Armington wanted to save money on energy costs and make her home more comfortable. Additionally, she is interested in environmental issues and wants to play her part with regard to energy efficiency.

In 2015, National Grid in partnership with lead vendor RISE Engineering, conducted a free comprehensive energy assessment of this property, provided instant energy savings products at no cost, and presented a recommended action plan. While on-site, the Energy Specialist installed energy-efficient LED bulbs, advanced power strips, and a new refrigerator coil cleaning brush. Mrs. Armington decided to move forward with several recommended actions, including installation of carbon monoxide detectors, replacement of the old furnace and a faulty heat pump, air sealing of leaks in drafty areas of the home, duct sealing, and duct and basement ceiling insulation.

The instant energy savings products, air sealing, and insulation following the no-cost home assessment created over \$1,100 in projected annual energy savings. Mrs. Armington is pleased with the savings and improved conditions, especially the warmth of the insulated floors. In 2016, Mrs. Armington contacted National Grid again to discuss some remaining energy improvements she is considering in the upcoming months.

The Armington Household continued

The Need

Reduce energy costs and improve efficiency and home comfort.

The Solution

- 25 efficient light bulbs
- Refrigerator coil cleaning brush
- 2 Advanced power strips
- Air sealing of leaks in drafty areas of the home
- Duct sealing and insulation
- Basement ceiling insulation

About National Grid:

Here with you. Here for you. At National Grid we are committed to delivering safe and reliable energy to the customers and communities we serve. We are one of the largest investor-owned energy companies in the world - covering Massachusetts, New York, Rhode Island and the UK. We are at the heart of one of the greatest challenges facing our society – delivering clean energy to support our world long into the future. Every day we work with stakeholders to promote the development and implementation of sustainable, innovative and affordable energy solutions. We are proud of the contributions our work and our people make to the prosperity and wellbeing of our customers, communities and investors.

About RISE Engineering:

A pioneer in the delivery of turnkey energy efficiency services, RISE Engineering works with utilities and other energy program sponsors to offer residential, commercial, industrial, institutional and public sector energy users comprehensive efficiency services that reduce their environmental footprint and operating expenses.

To schedule your free energy assessment, call us at 1-888-633-7947.

TO BE UPDATED

The Result:

Total project cost	\$3,243
National Grid incentive	\$1,020
Cost to customer	\$2,223
Annual electric savings	1,400 kWh
Annual oil savings	235 gallons
Annual energy cost savings	\$1,146

"I paid for the energy efficiency work online with my credit card that earns points at L.L. Bean. I earned enough points to get a free down comforter... so my insulation warmed me twice!"

**-Carolyn Armington, Homeowner
Jamestown, RI**

Cut your energy cost with cogeneration

Energy-efficiency on a large scale

Managing the energy needs of a big facility can be a daunting prospect. National Grid routinely works with commercial, industrial, and municipal customers to reduce energy costs on a large scale. One way we achieve this is through cogeneration, or combined heat and power (CHP), a highly efficient form of energy conversion that generates heat and electricity simultaneously, then captures and reuses heat that would otherwise be wasted.

For qualifying customers with a large-scale facility or a multi-building complex with dependable electrical and thermal loads, National Grid can connect you with a CHP vendor to explore the feasibility of CHP installation. National Grid provides incentives to customers if the project qualifies under our CHP program guidelines.

Current Incentives for Combined Heat and Power:

The incentives for the CHP units are designed specifically with large-scale projects in mind, with higher incentives for projects that incorporate more standard building energy efficiency measures in advance of CHP project development.

Available incentives are as follows*:

Tier 1: \$900/Net kW for CHP with annual efficiency >55% and <60%.

Tier 2: \$1,000/Net kW for CHP with annual efficiency > or equal to 60%.

Tier 3: Reduce the site energy use at least 5% or identified by TA study - \$1,125/kW for CHP projects with annual efficiency >55% and <60%.

Tier 4: Reduce the site energy use at least 5% or identified by TA study - \$1,250/kW for CHP projects > or equal to 60% annual efficiency.

TO BE UPDATED

Eligibility Criteria:

- Performance Incentives are available for projects that are Net Annual KW over 1 MW and can be up to \$20/kW/yr for up to 10 years.
- Advanced Gas Technology Incentives are available for projects that qualify for gas driven projects.
- Maximum incentive of all three sources cannot exceed 70% of the project cost.
- Technical Assistance Engineering subsidy is available to study projects.

For more information about our incentives for CHP
call us at **1-800-787-1706** or visit **ngrid.com/ri-chp**

Appendix B:
2017 Energy Efficiency Vendors

The list includes contractors and subcontractors performing work directly for National Grid Energy Efficiency programs in 2017 that were counted in the FTE analysis and additional companies who assisted customers to secure equipment rebates, for example through the New Construction, upstream commercial lighting, or High Efficiency HVAC programs. The list also includes the Community Action Program agencies and their subcontractors involved with the delivery of the low-income program, whether under National Grid funding or WAP/LIHEAP/ARRA funding.

Of the ### companies, agencies, contractors and sub-contractors listed here, ### (##%) are either headquartered in Rhode Island, or have a physical presence in Rhode Island. The list is organized first by state (alphabetically), and then alphabetically by company name.
